One of the challenges we face in designing transformers and adapters for the international markets is the wide variety of Line voltages and frequencies used throughout the world. Knowing the intended market(s) for our transformers in the Design phase is critical. The chart below is a partial list of countries and their line voltages and frequencies.

Country	Freq. Hz	Voltage(s)	Country	Freq. Hz	Voltage(s)
Argentina	50	220 /380/440	Mexico	60	127 /220

Items in **bold** type indicate the most common single-phase voltages and frequencies in the given country.

¹ Where multiple voltages and/or frequencies are listed, but none are in bold type, they are about equally widespread in that country.

² Members of the European Union are slowly migrating toward a 230V standard and have temporarily adopted a 220-230V compromise.
